← iPad version

On the App Store for iPad, two versions of the LINE Webtoon app exist.

Problem Space

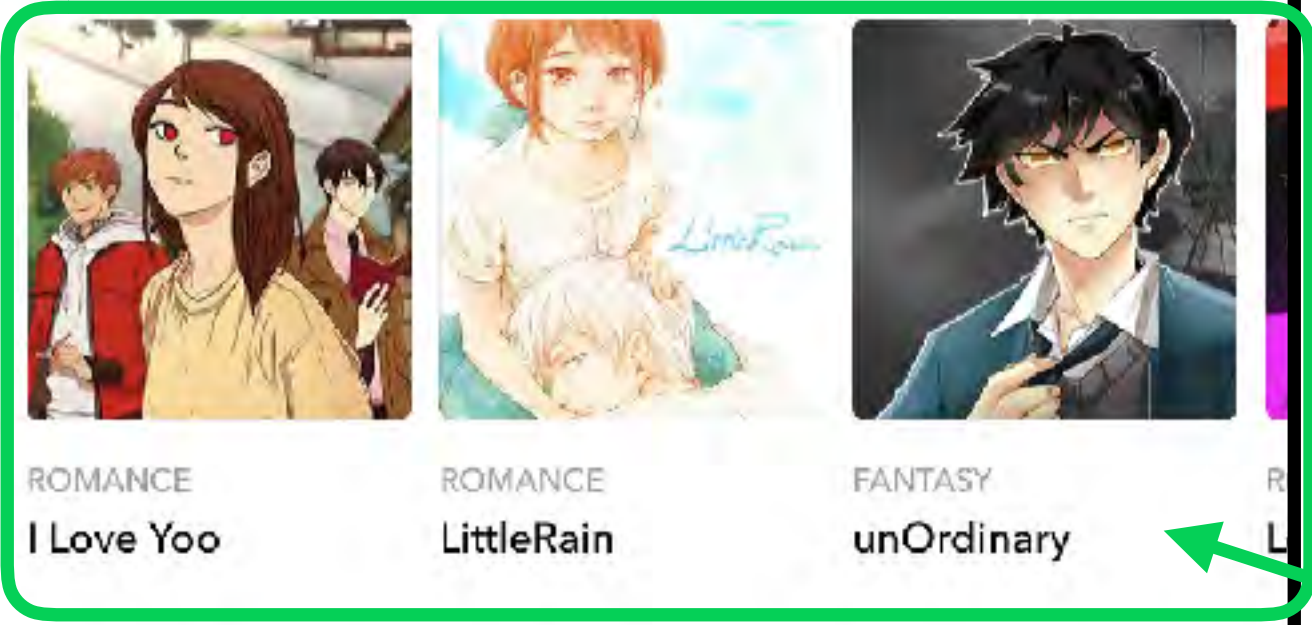

Mobile version

iPad version

It's then interesting to see that the iPad version of the app is structured differently to the mobile version! Let's take a closer look...

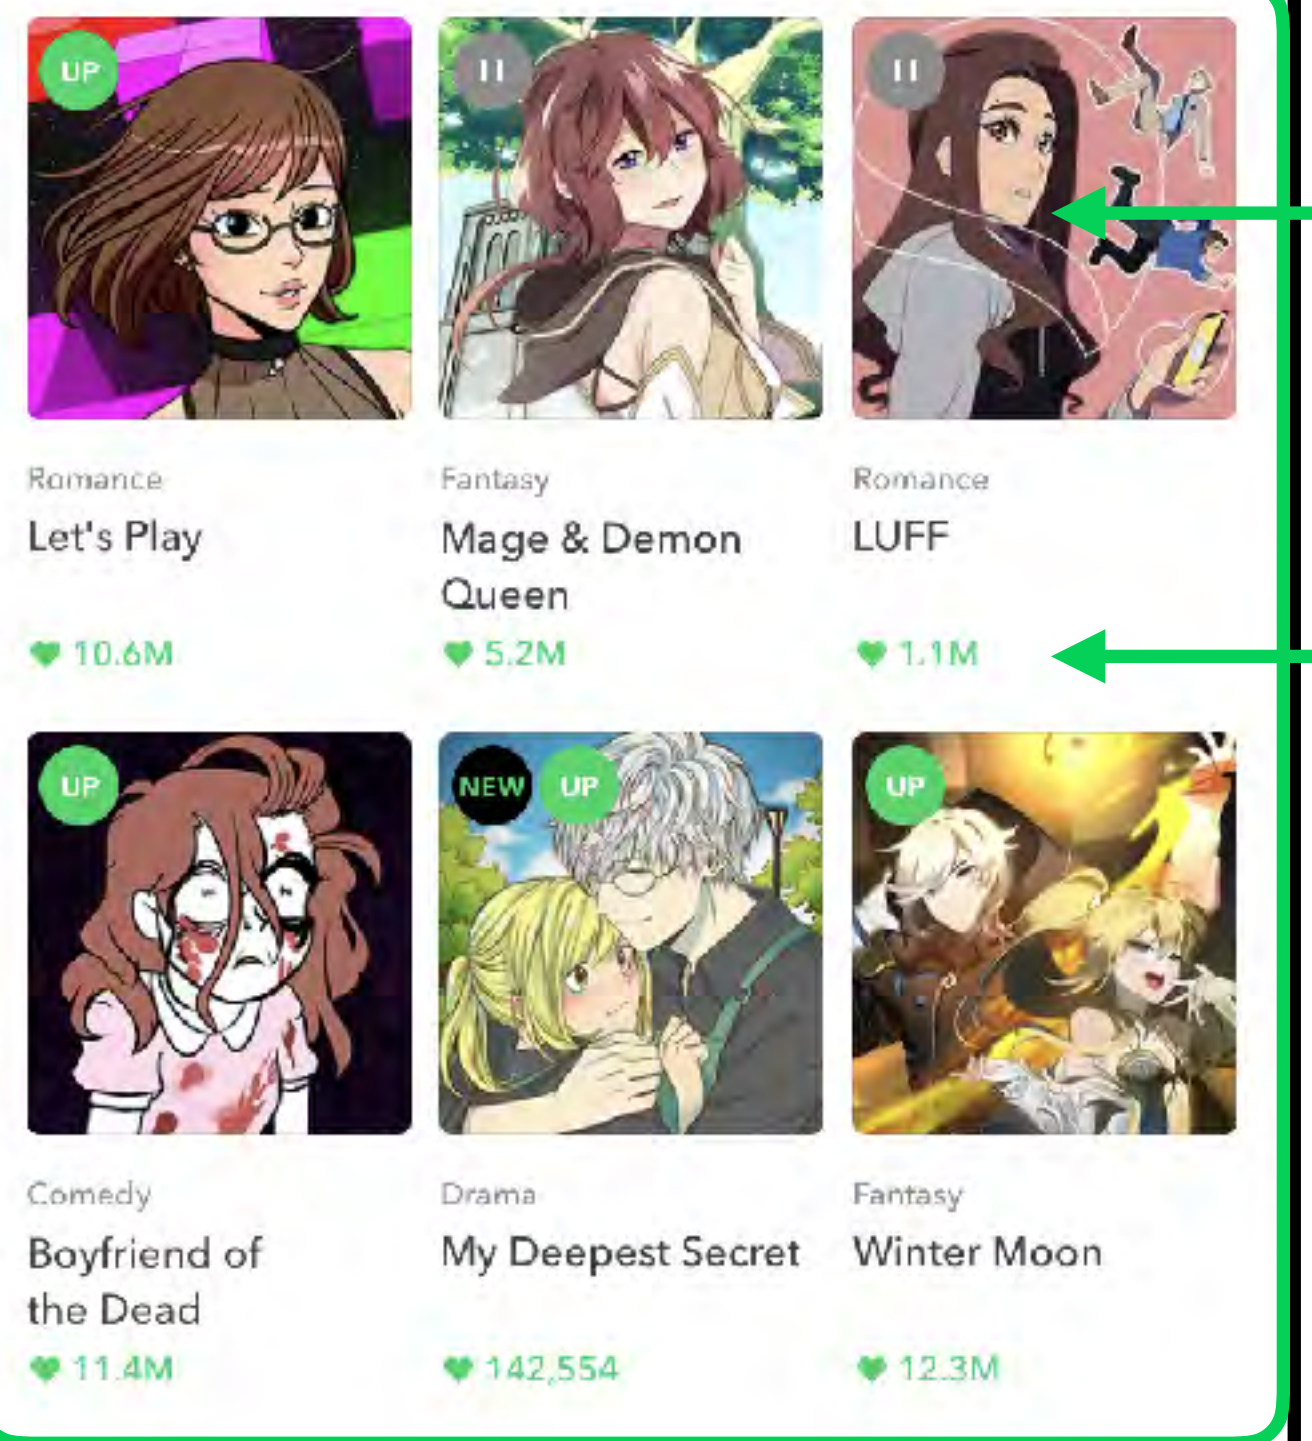

Recommended for Chatoyan

Modal navigation drawer

Carousel format

Daily

Updated grid format for "Daily"

Stars for iPad
Liked hearts for mobile

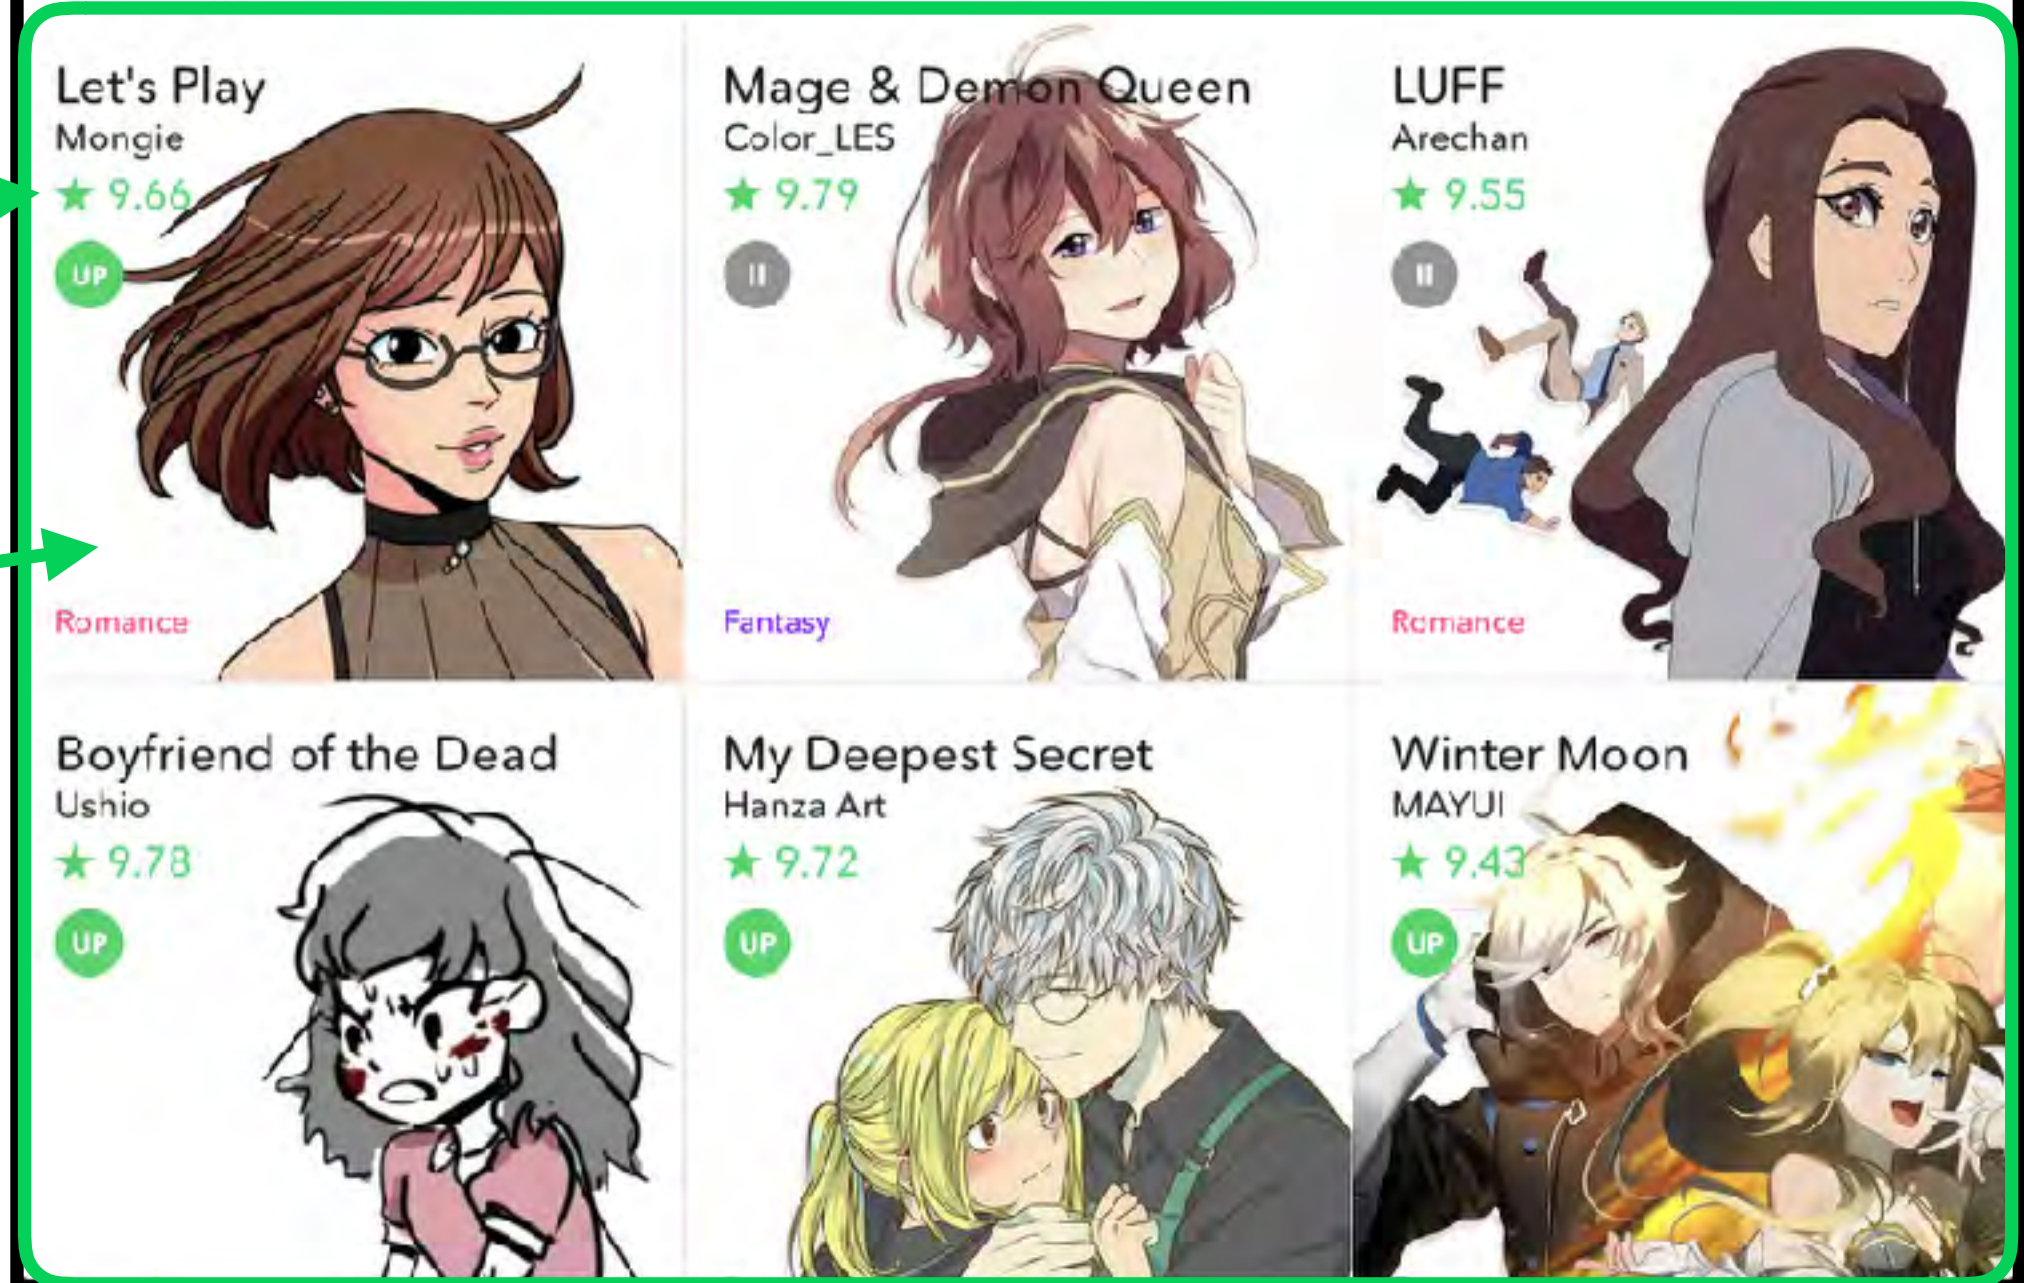

Grid format with transparent splash art as opposed to ones w/ background

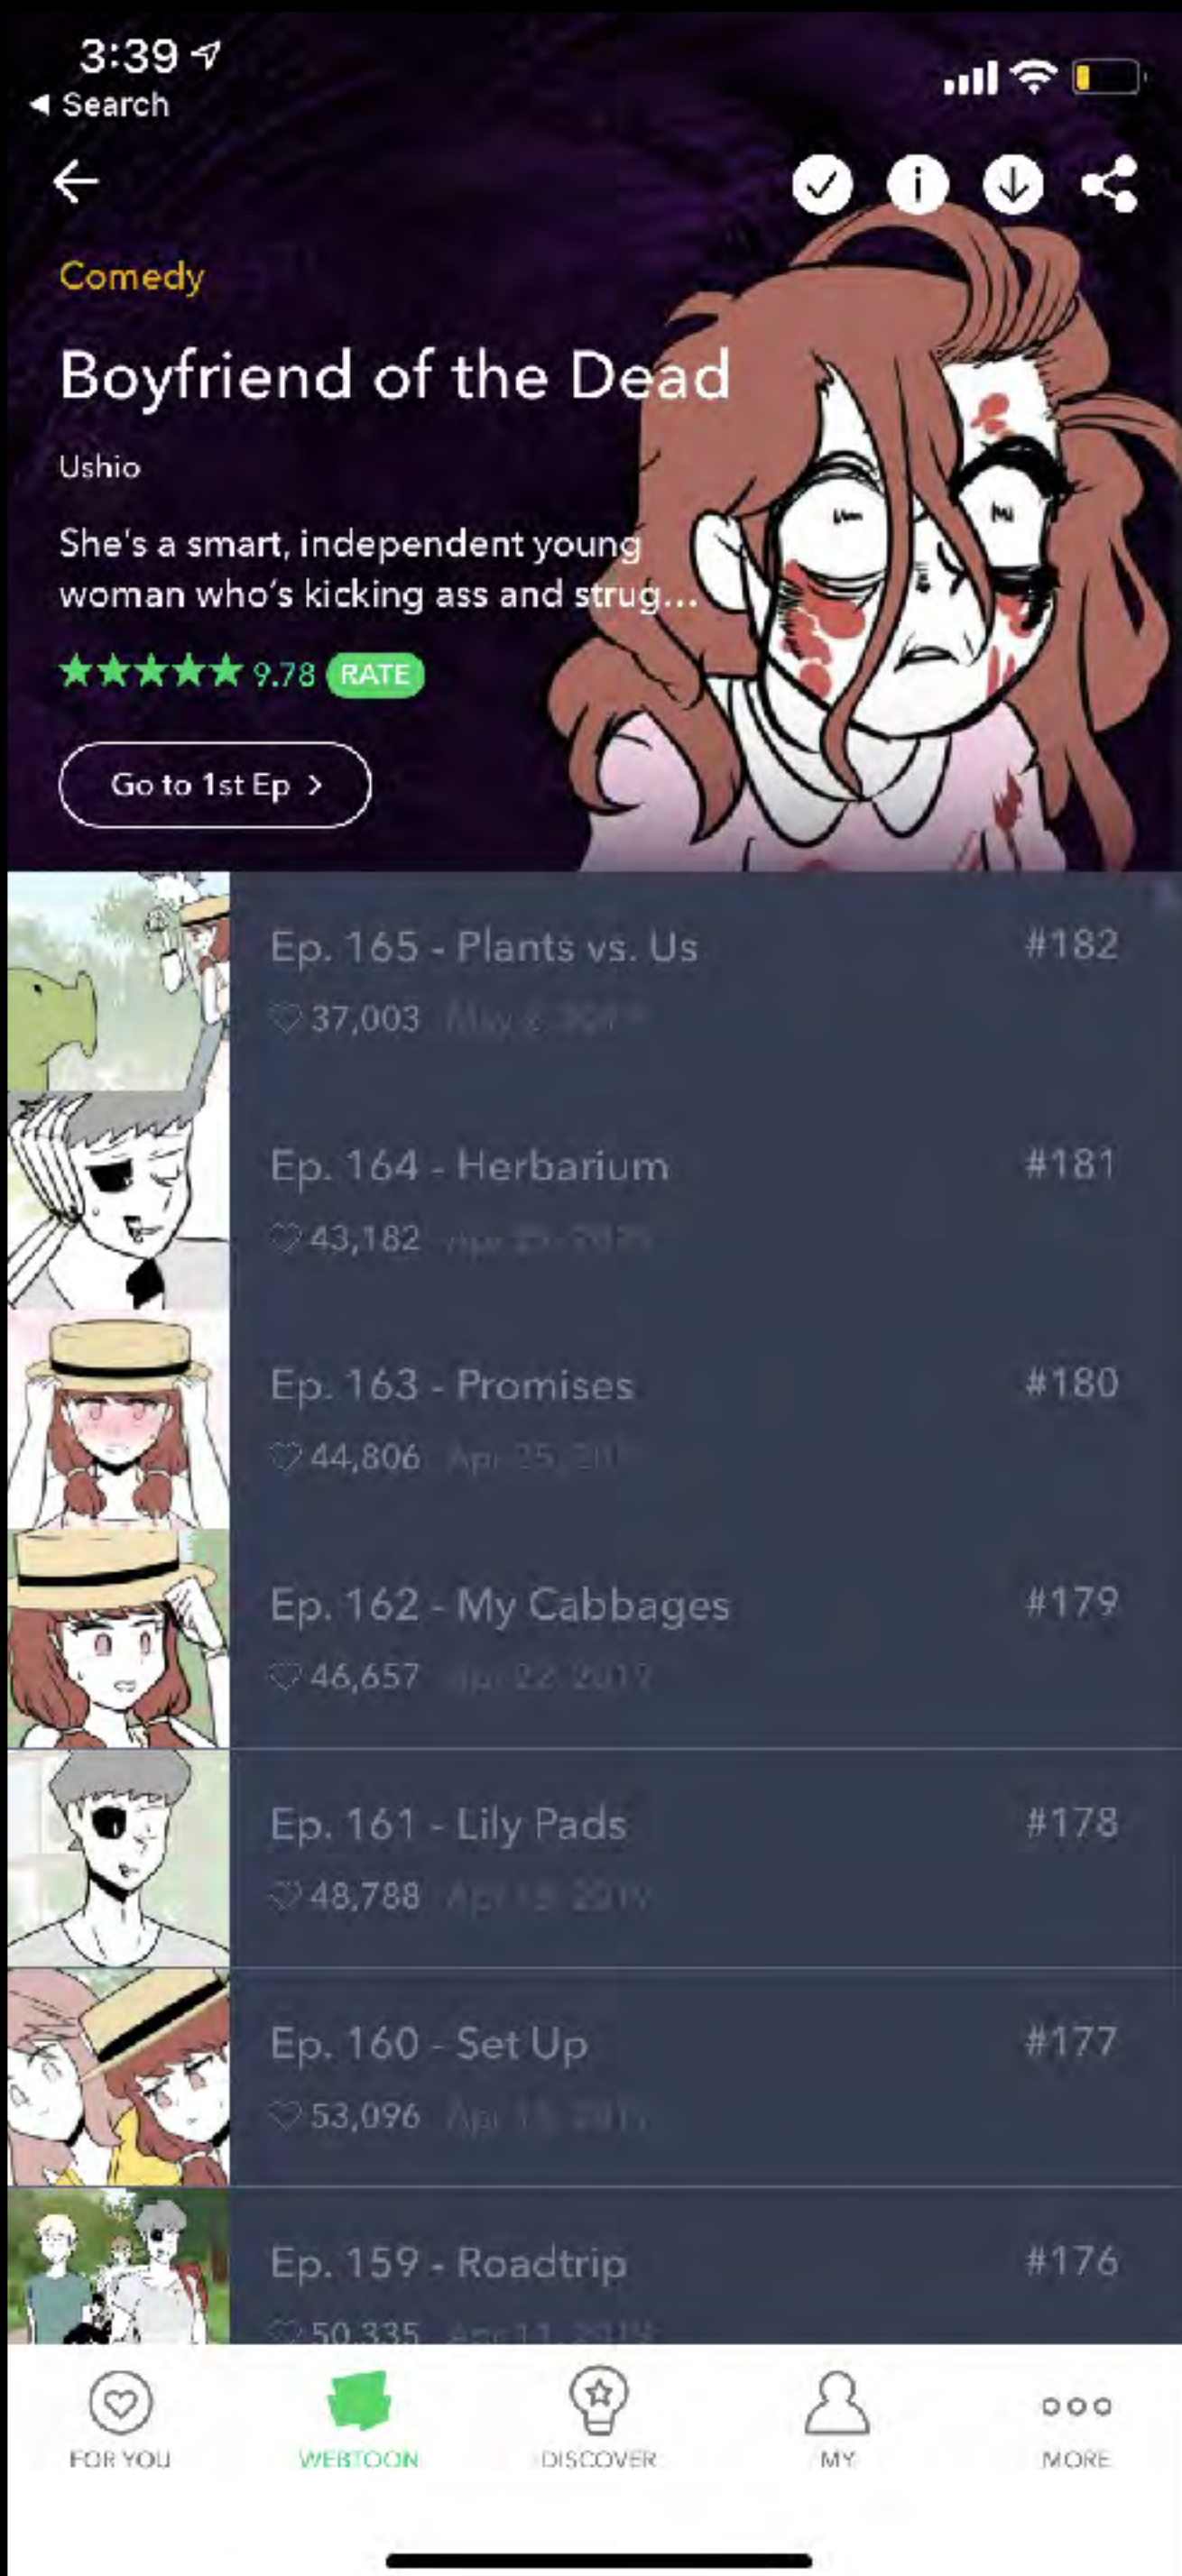

Bottom navigation bar

Top Titles

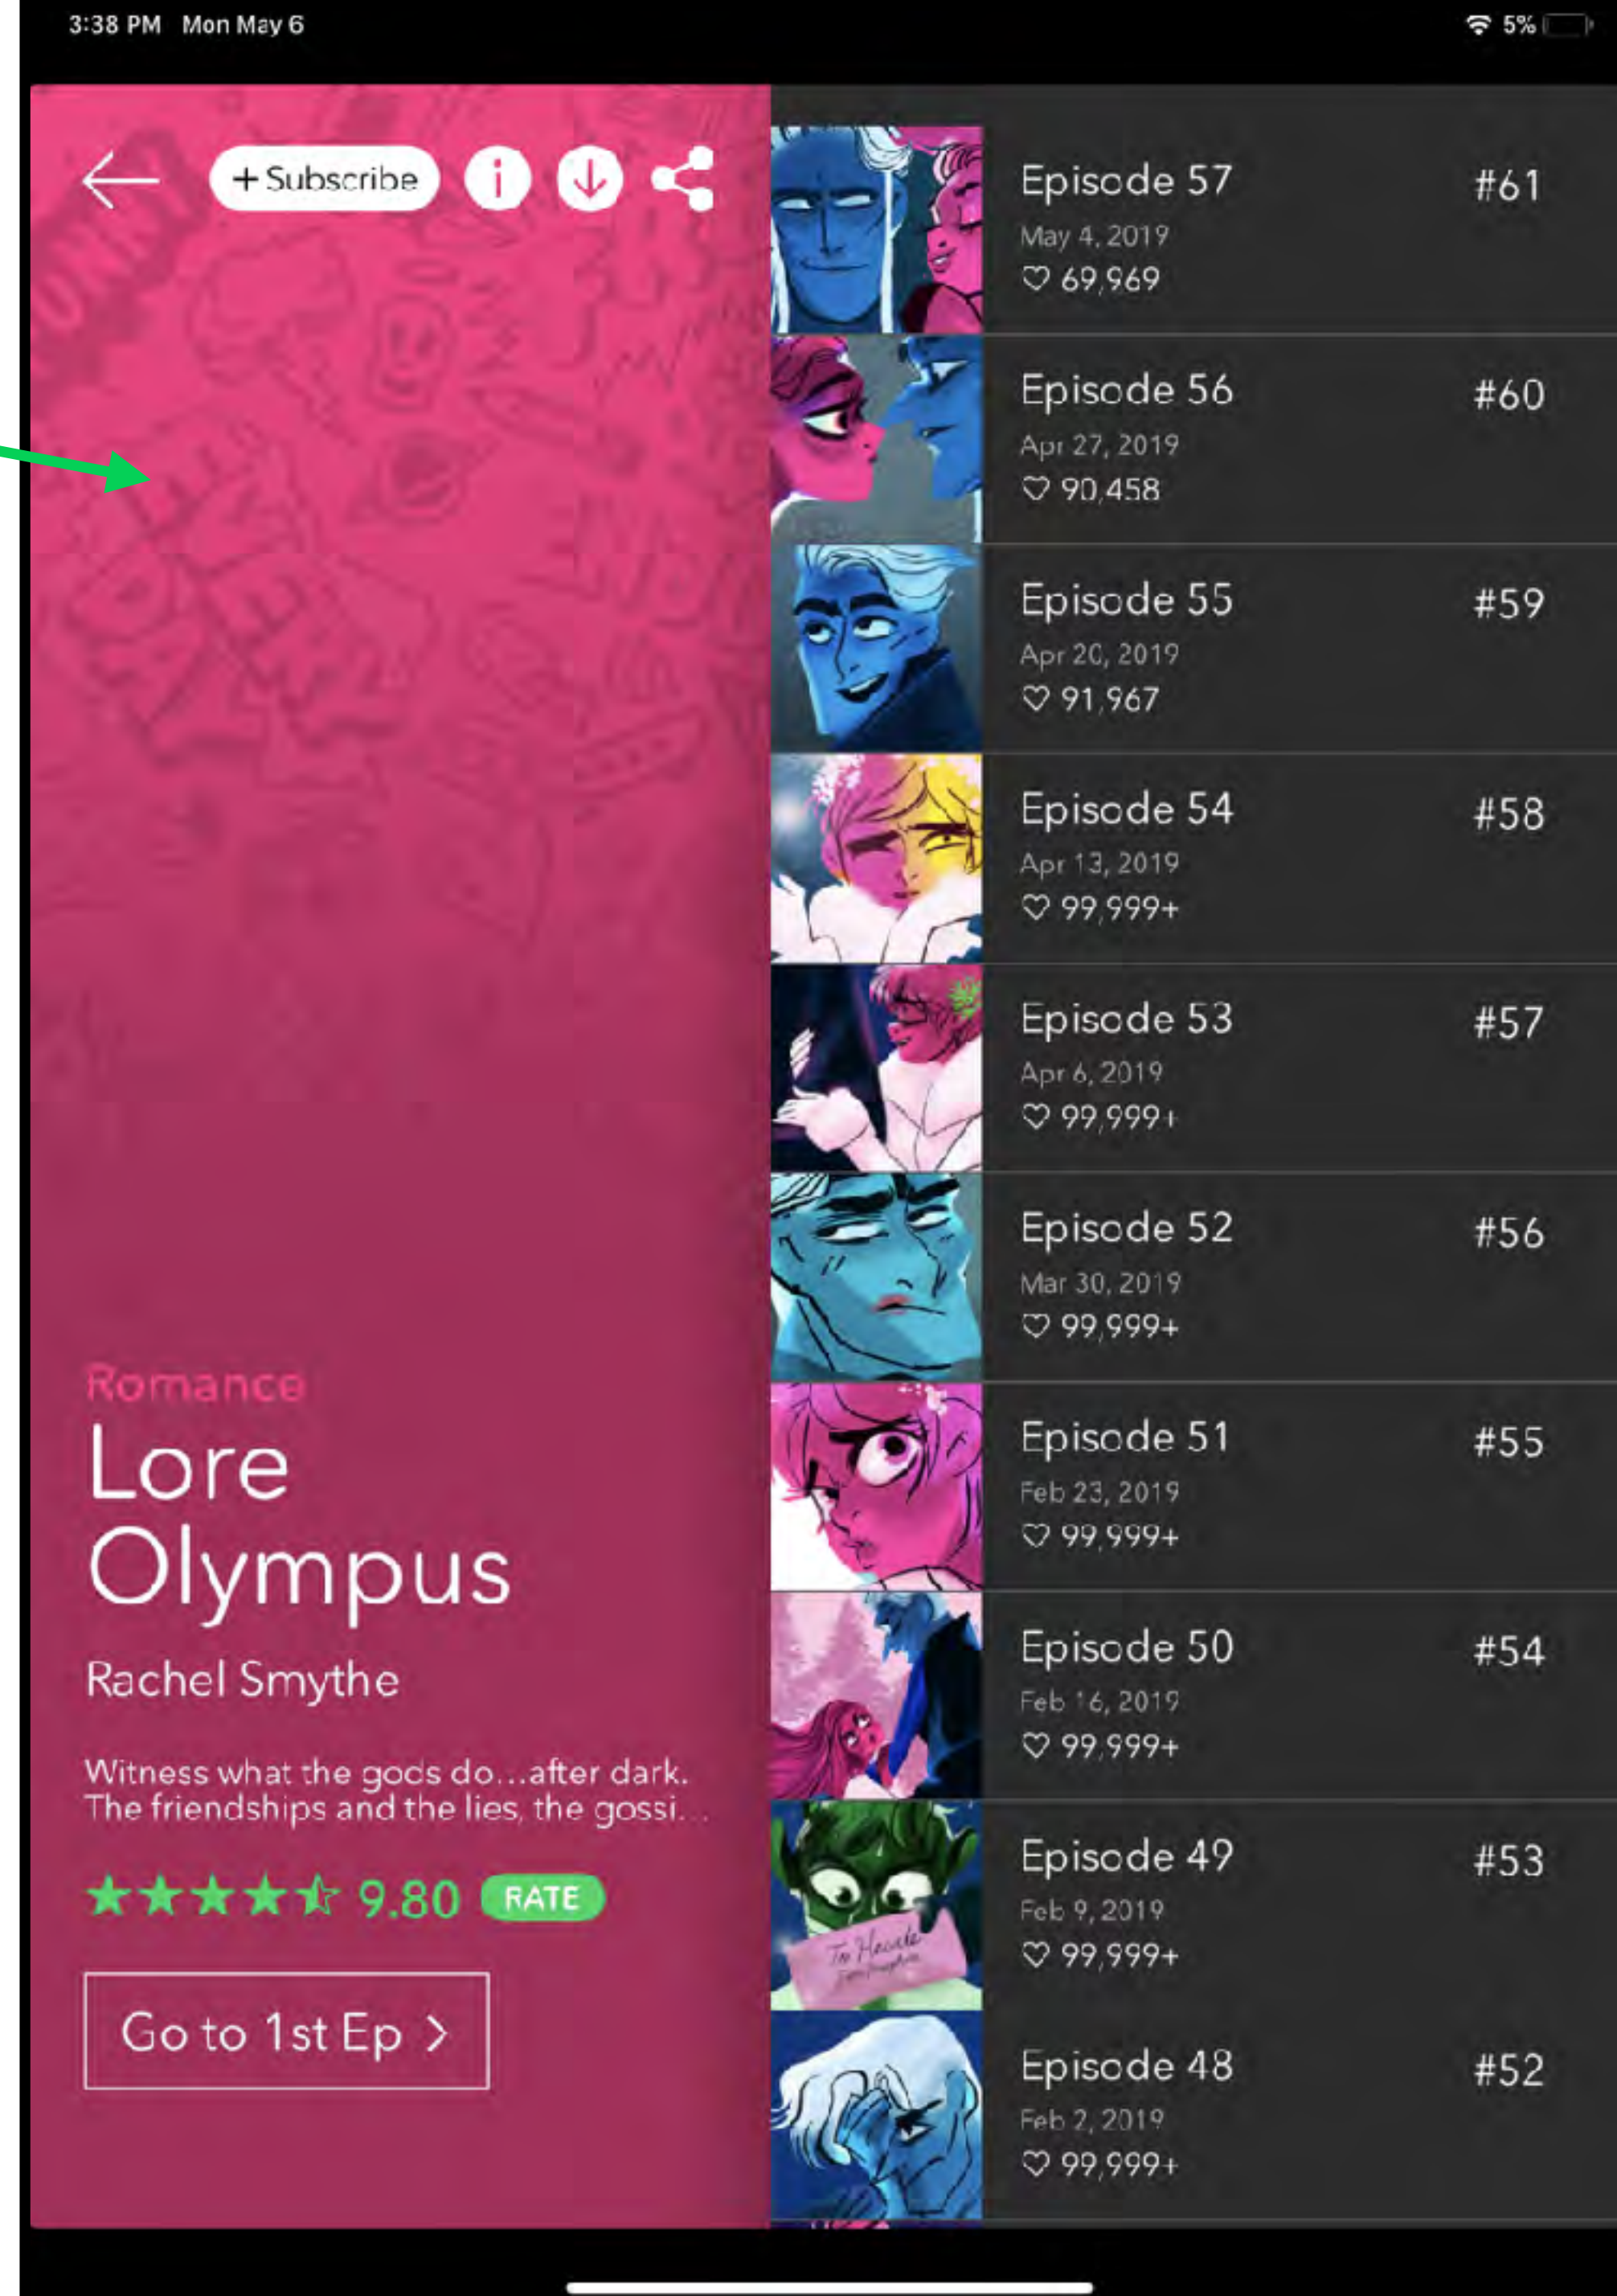

Today's Webtoon

Default splash art rather than Webtoon-specific splash art

Interesting side by side detail page compared to top-to-bottom scroll for mobile ver.

Problem Space

Let's make some **assumptions**:

- More users likely own smartphones than tablets.
- There are more WEBTOON users on the mobile version than on the tablet version.
- The WEBTOON app is currently not universal (not designed/developed with a single framework that is compatible for both iPhone/iPad).
- Likely the mobile version is more up-to-date with the WEBTOON team's design standards than the tablet version.

Problem Space

With these assumptions in mind, we can formulate our design question:

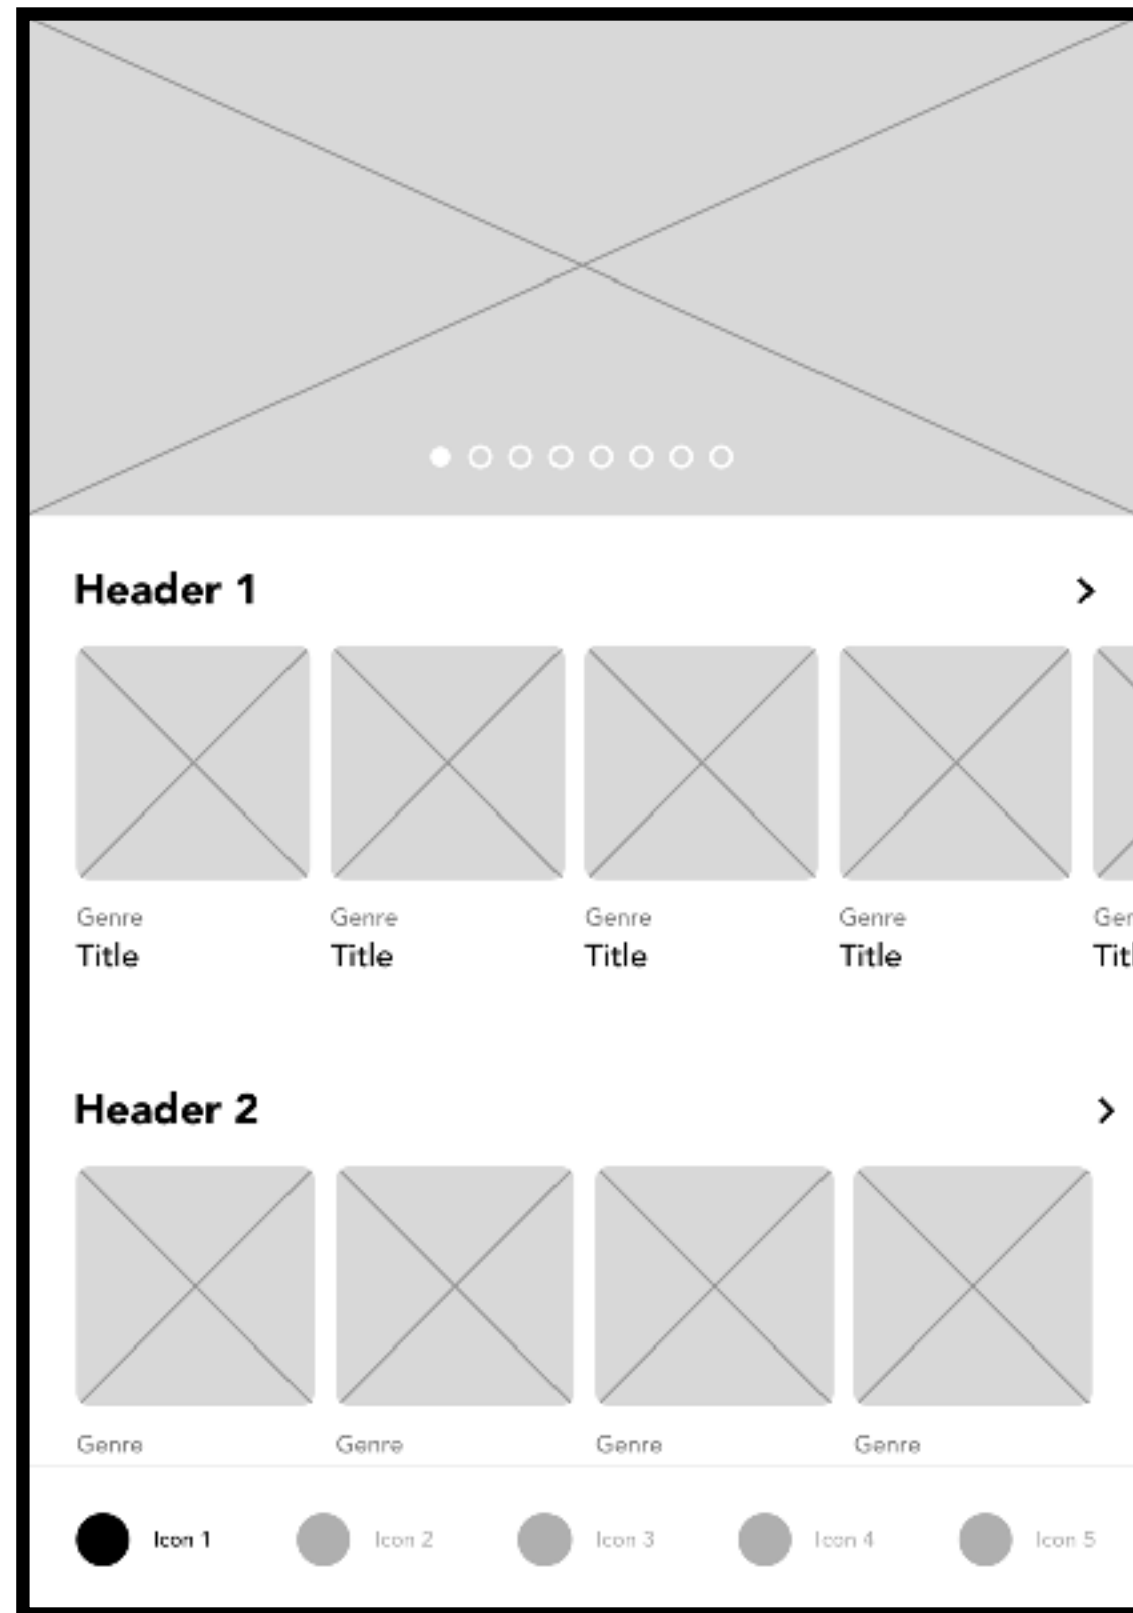

“How might we redesign the iPad version of WEBTOON to better resemble the mobile version for consistency?”

Problem Space

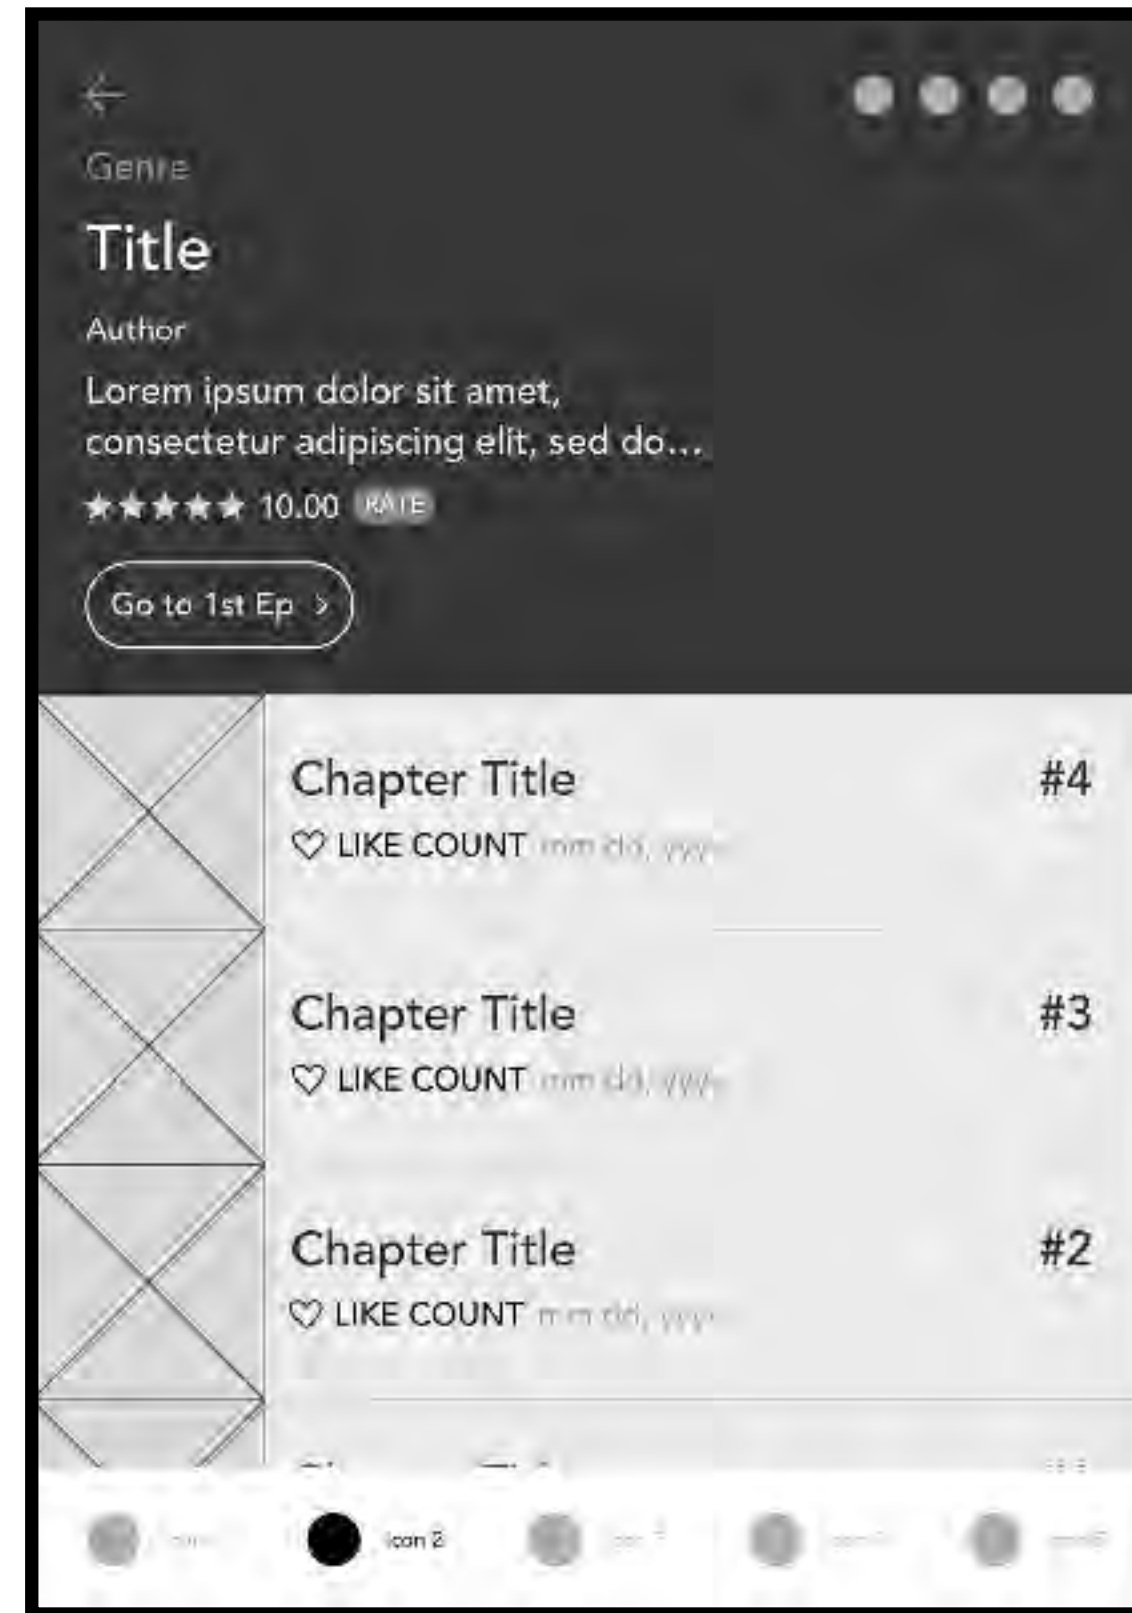

What are the **benefits** to updating the iPad app to resemble the mobile version?

- Cross-platform consistency between versions
- Universal design down the road will allow for easier support across all devices
- Don't need to download the same app twice → downloading off App Store for the iPhone will download the same on the iPad
- Can promote a clearer brand identity for WEBTOON + a more continuous user experience

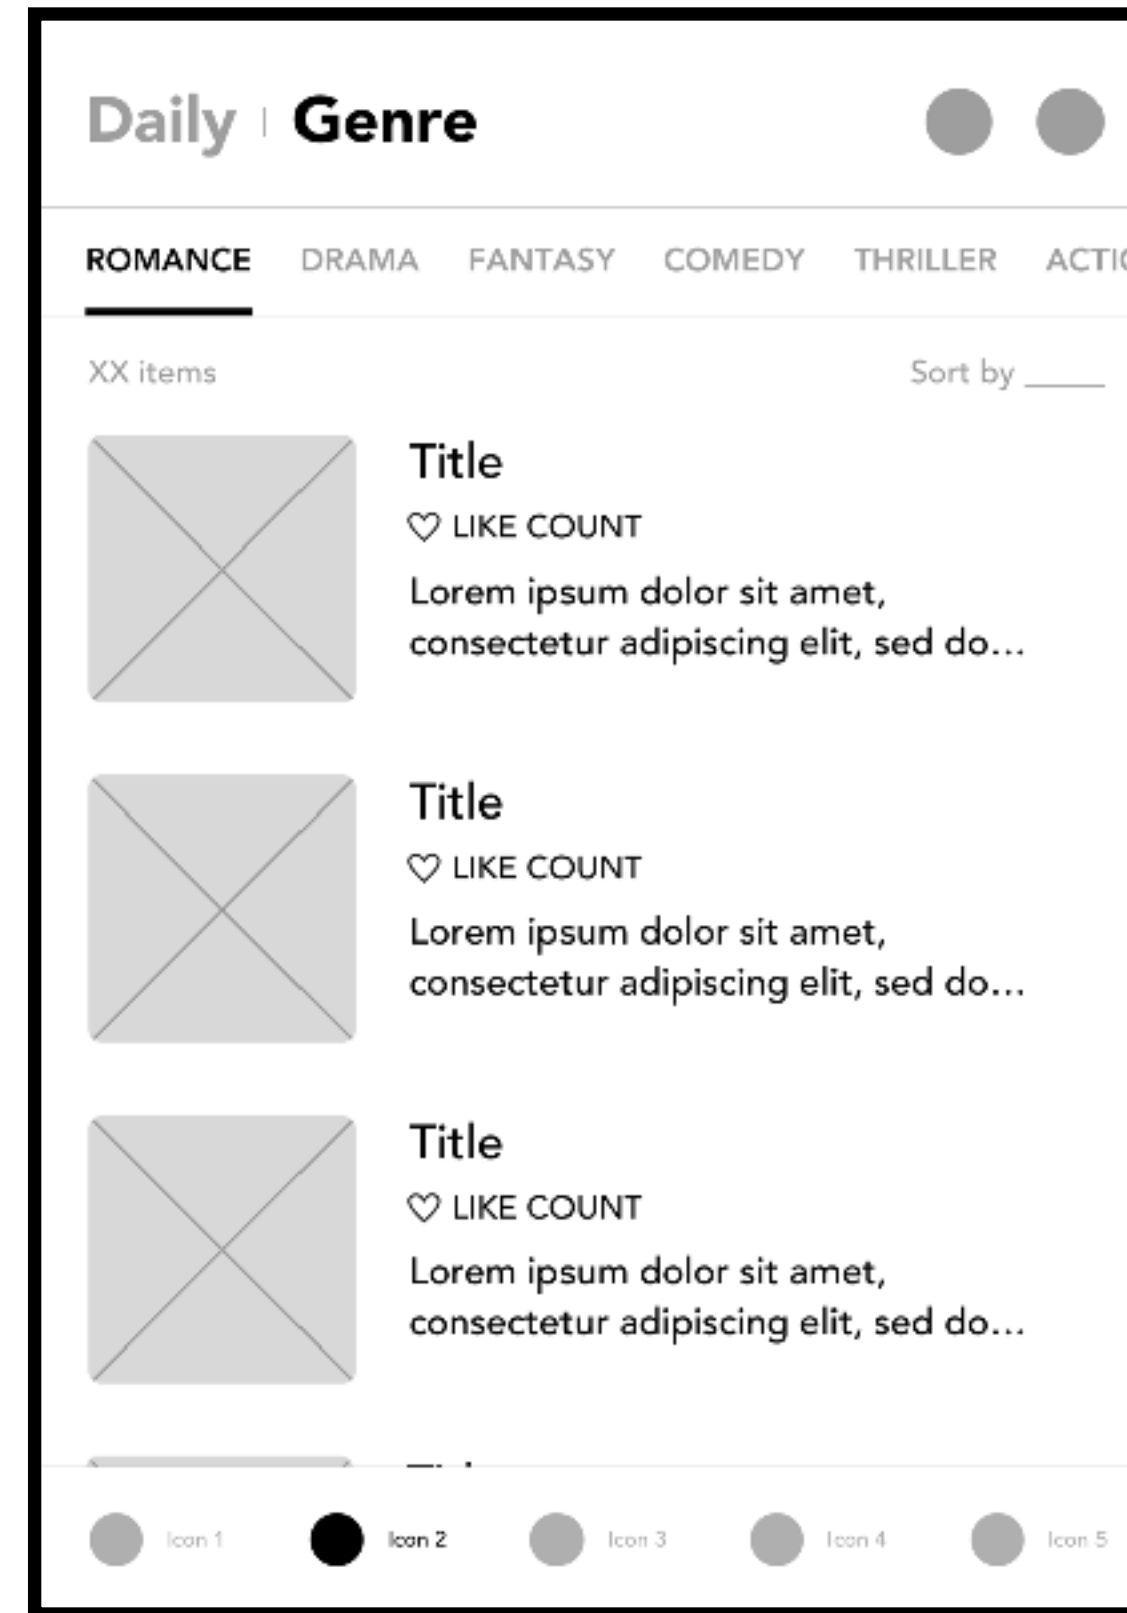

Wireframes

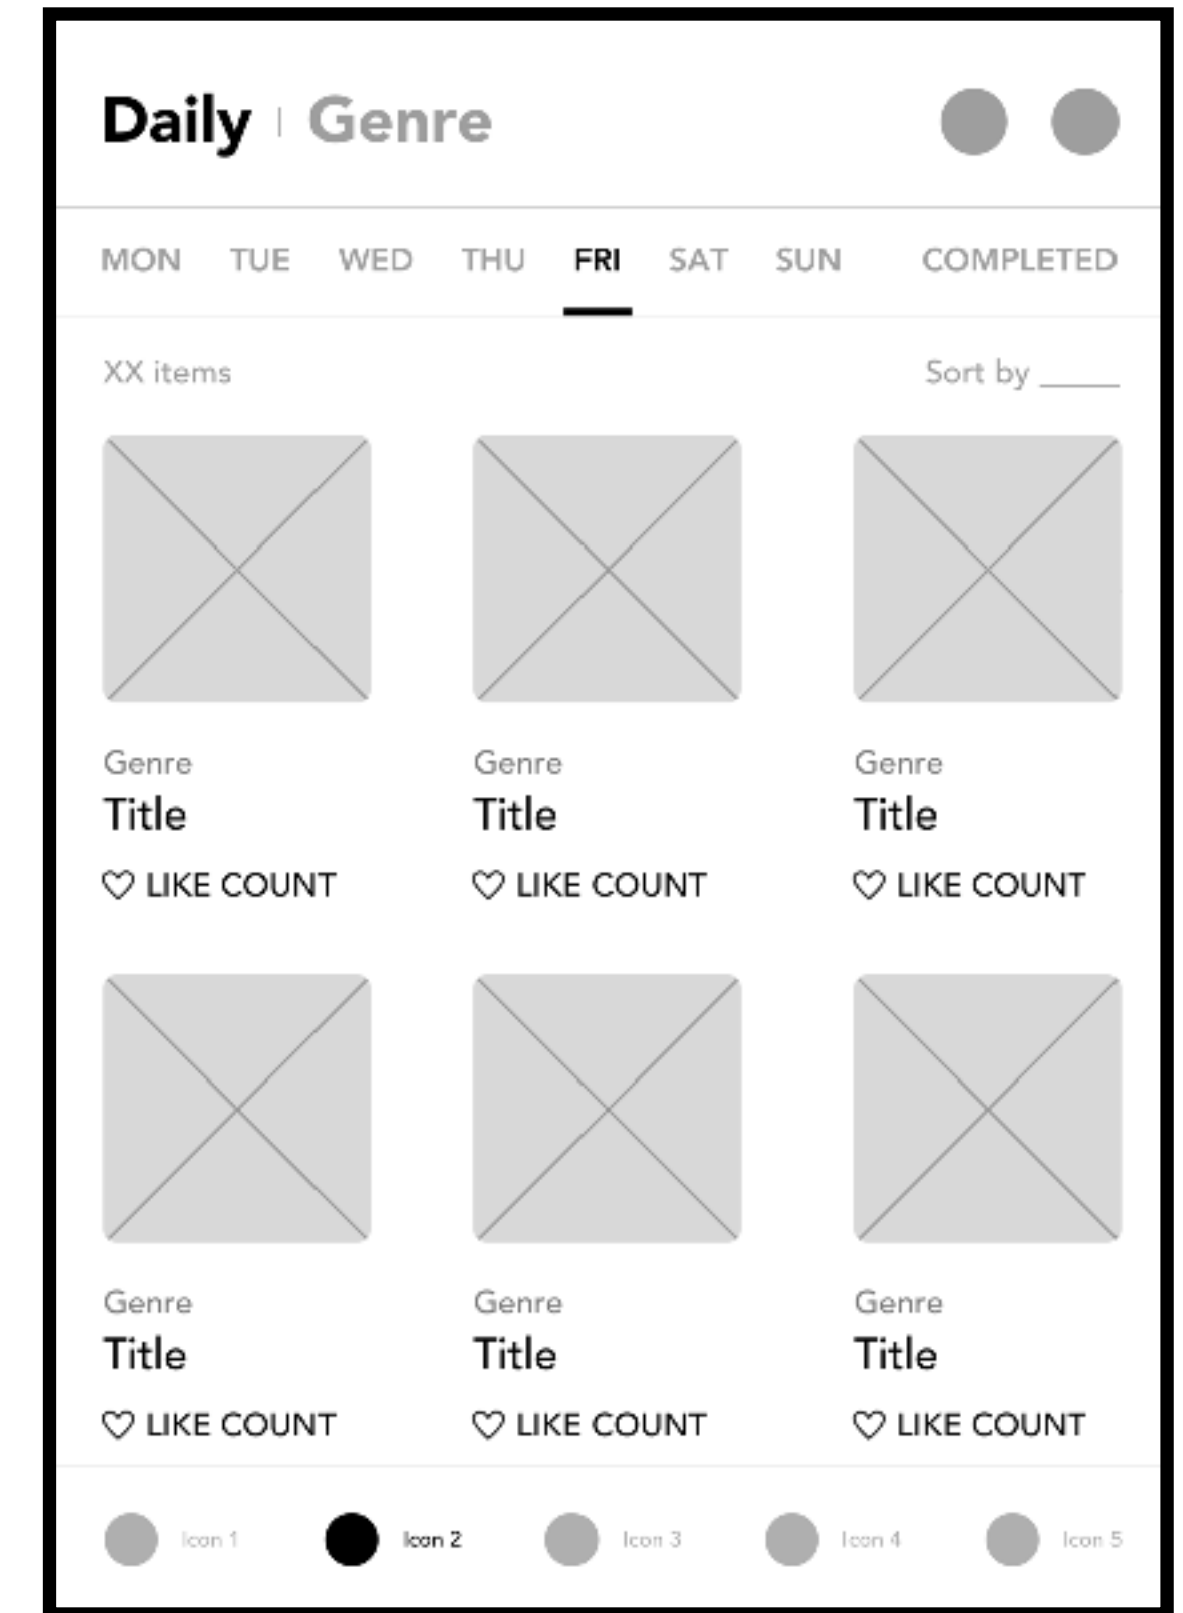

Home

Webtoon expanded screen

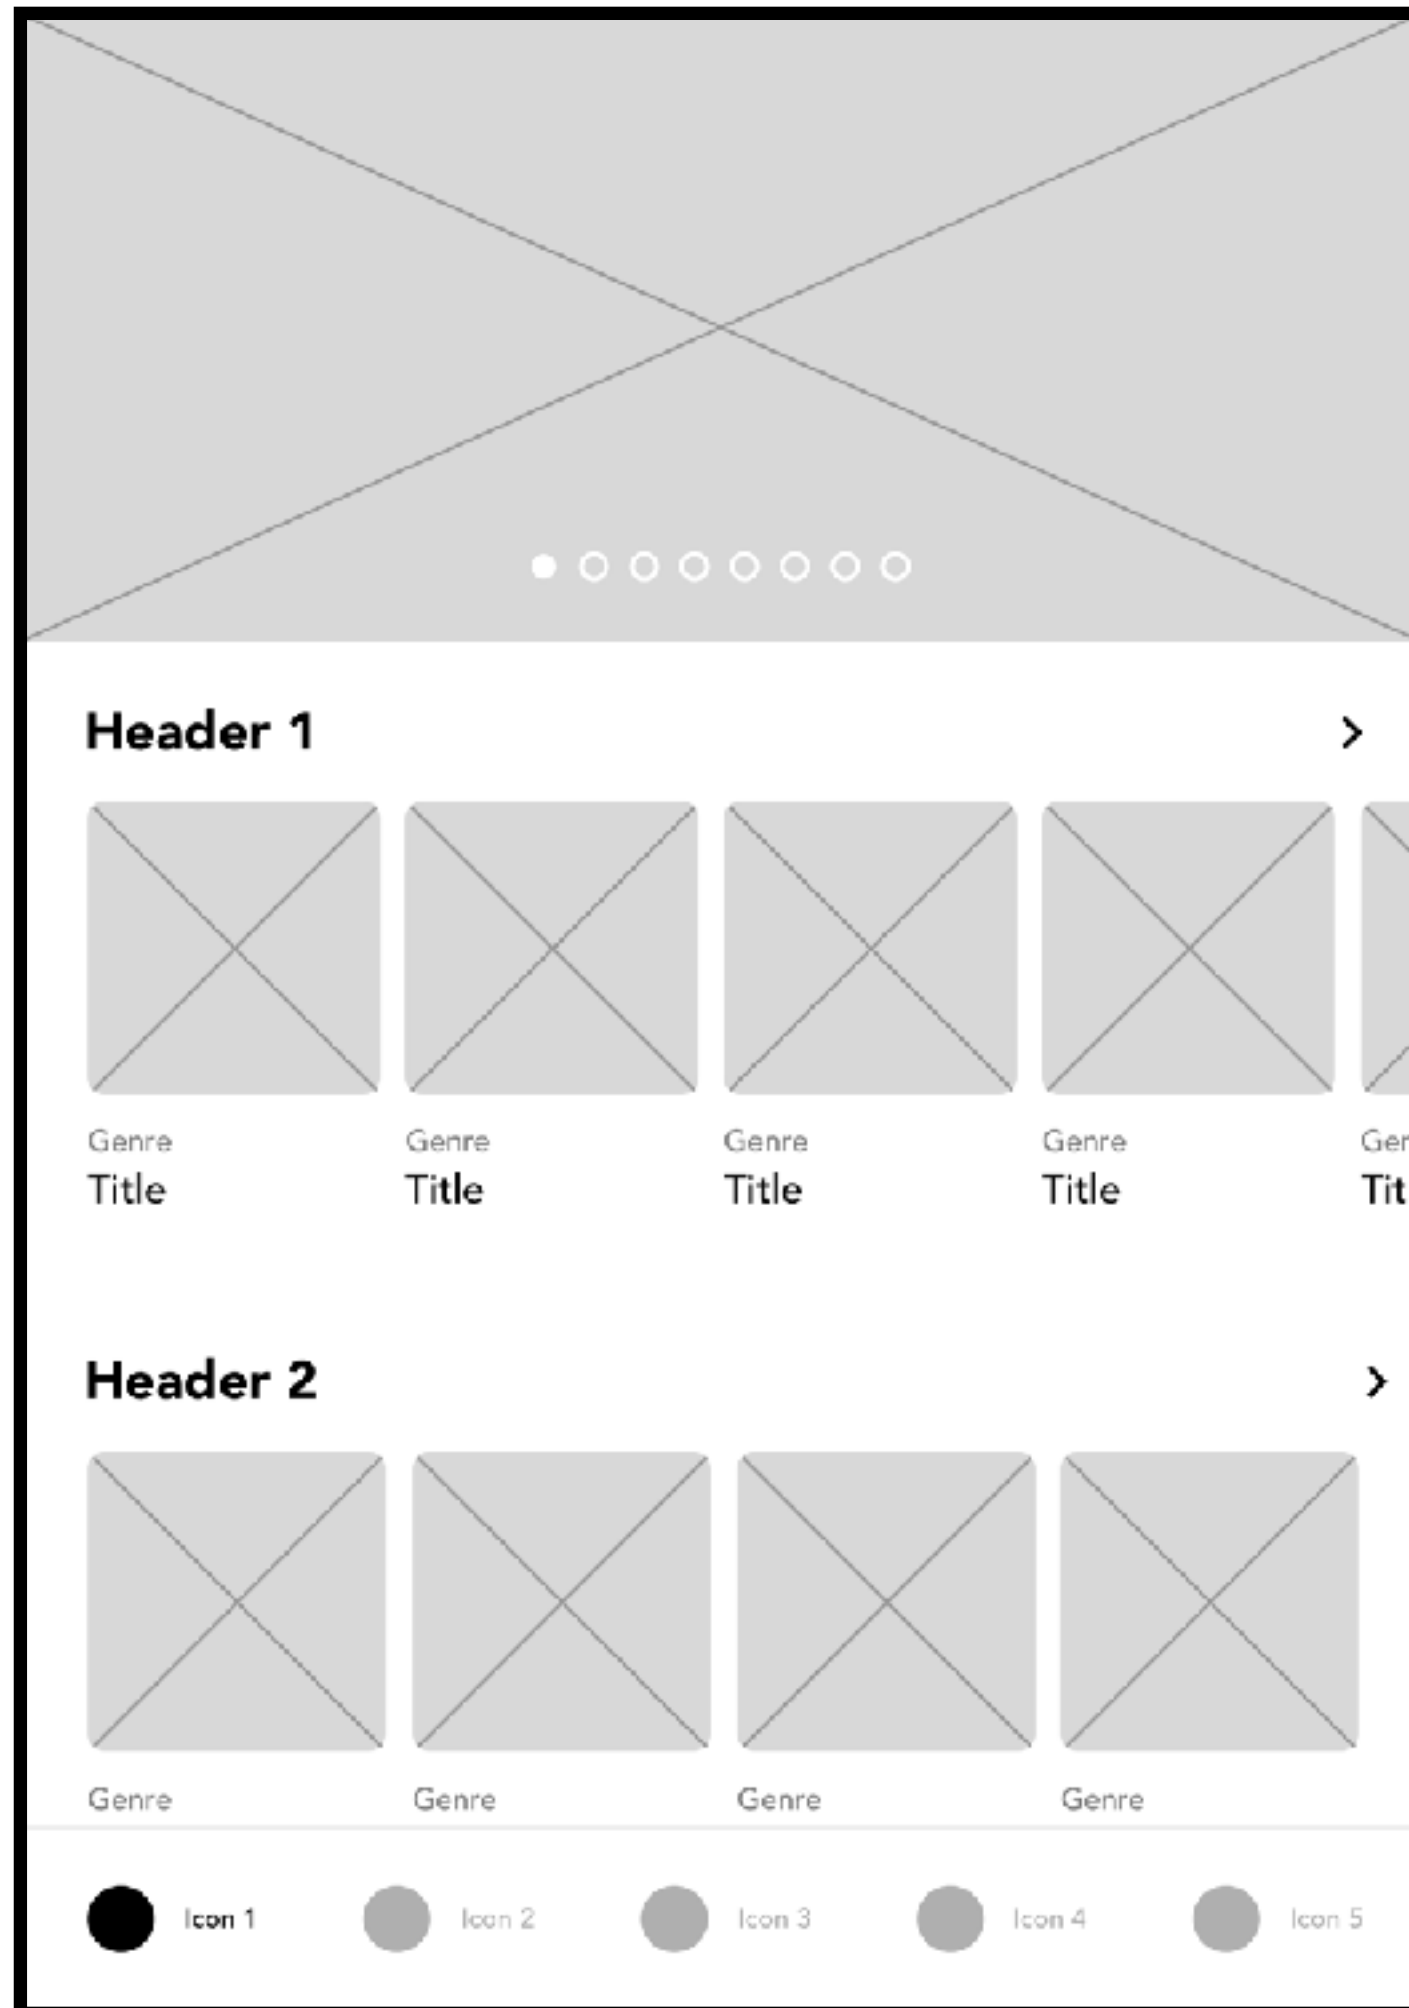

Genre screen, list

Daily screen, grid

I designed these wireframes in Sketch, and tried to have screens resemble what they looked like on the mobile version while keeping to proportions.

Wireframes

One thing I did change was the orientation layout for icons in the bottom navigation bar. Rather than setting the icon label text directly underneath the icon, I decided that the larger width on the iPad would benefit from displaying icon text to the right of the icon.

Mockups

Current Home Screen on Mobile ver.

Redesigned Mockup of Home Screen

Next Steps & Considerations

- Exploring the significance between ♥ (likes) and ★ (rating /10)
 - Noticed an interesting difference in priority between current mobile version (updated for US) and tablet version (resemblant more to KR version)
- Should there be any special design exceptions made for the tablet version that is not on mobile?
- Could resolution uploads be changed so that image quality could improve on larger screens (and if so, SHOULD they? → upload requirements for WEBTOON authors would change)

Thank you.
